EXECUTIVE SUMMARY

Computer Science undergraduate with strong Python programming skills and solid foundations in Computer Networks, Operating Systems, and Data Structures. Built modular, automated software pipelines through Deep Learning, Computer Vision, and RAG-based LLM projects.

EDUCATION

Sri Ramakrishna Engineering College

B.E. Computer Science and Engineering | CGPA: 7.22

Coimbatore

2023 – 2027

R.J Matric Higher Secondary School

Higher Secondary Certificate (HSC) | Percentage: 71.3%

Coimbatore

2022 – 2023

INTERNSHIPS

AI & Machine Learning Intern

June 2025

NXT Logic

- Applied core AI/ML concepts — supervised and unsupervised learning — across real-world use cases and domain-specific datasets.
- Explored modular ML pipelines including data preprocessing, feature engineering, model training, and performance evaluation.
- Built a strong foundation in data-driven problem solving and intelligent system design.

Web Development Intern

December 2025

VisionCrop Infotech

- Designed responsive web interfaces using HTML, CSS, and JavaScript with a focus on usability and cross-device compatibility.
- Collaborated with the team to refine UI components, improving website layout, visual hierarchy, and user experience.
- Gained hands-on exposure to frontend workflows including version control with Git and structured code review practices.

PROJECTS

FIREGUARD – AI Fire Detection & Emergency Intelligence System | *Python, Deep Learning, CV, RAG, LLM*

- Built a modular, real-time fire detection pipeline in Python using Deep Learning and Computer Vision on live video streams for instant threat identification.
- Integrated a RAG-based LLM with vector embeddings to retrieve safety protocols and deliver accurate incident responses.
- Designed a low-latency, automated alerting pipeline with context-aware threat analysis to enhance emergency decision-making.

Intelligent Multi-Threat Detection & Surveillance System | *Python, Computer Vision, Deep Learning*

- Extended FIREGUARD into a modular multi-class detection system for fire, weapons, intrusions, and human presence in real time.
- Built an AI-driven surveillance system with automated alerts and severity-based threat escalation logic.
- Enabled scalable, testable security intelligence in high-risk environments through CV-based threat classification.

RAG-Based LLM Question Answering & Decision Support System | *Python, LLM, RAG, NLP*

- Built a modular RAG pipeline in Python combining LLMs with vector-based document retrieval for context-aware, grounded responses.
- Indexed structured and unstructured data using embeddings, enabling natural language querying with reduced hallucinations.
- Optimised retrieval pipelines for enterprise-scale AI applications, improving accuracy and response quality.

TECHNICAL SKILLS

Languages: Python, Java

Frontend: HTML, CSS, JavaScript, Responsive Web Design

AI / ML: Machine Learning, Deep Learning, Computer Vision, NLP, LLM, RAG

Frameworks & Libraries: TensorFlow, OpenCV

Tools: Git, GitHub, Hugging Face, Jira, VS Code, CVAT, Roboflow

Core Concepts: Data Structures, OOPS, DBMS, Operating Systems (Linux), Computer Networks (OSI Model, TCP/IP)

ACHIEVEMENTS

- Developed FIREGUARD, an AI-powered fire and multi-threat surveillance platform integrating Computer Vision and RAG-based LLMs.
- Completed dual-domain internships in AI/ML and Front-End Web Development, gaining cross-functional industry exposure.

CERTIFICATIONS

- NPTEL** – Advanced Computer Networks (OSI Model, TCP/IP, Network Protocols)
- NPTEL** – Privacy and Security in Online Social Media, Cyber Security and Privacy
- AWS** – Fundamentals Certificate
- Skillrack** – C Programming Certification
